Assignment Title:
Student name:
Student number:
Tutorial class:

Notes about this template document: This document is only a suggested template for your Assessment Task 2, you do not need to strictly adhere to the suggested structure or content. In general, to help guide your research and writing, try to research and present broad general information first, before diving into detail i.e., go from broad → narrow detail. This helps to structure your research and writing, and also helps the reader to follow and understand your research. Remember to write in third person only for academic writing!

Your research topic:
Summarise your research for the **ONE TOPIC** that you researched. Your team should have split up the background research so that each team member only focuses on one topic to research related to your team's Design Project Topic - for example:

Relate your research to your team's chosen Design Area and Design Project - first explain which Design Area and Design Topic you chose, then summarise your research. **Do not think about or research design solutions yet, just background research to understand the problem!**

References
You should have a least 4 references excluding EWB sources and at least 2 EWB sources with in-text citations in your writing above, from a variety of different source types i.e., not just all websites.

Ensure that all information sources that you have cited in your assignment are listed here in the reference list! Conversely, all sources in the reference list must be cited in your assignment text.

Information sources that you *do not* cite in-text but used in your research and background reading are *not* included in the reference list – this is the difference between a bibliography and a reference list.

Help from the UTS Library for APA referencing:
